PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience designing, developing, and debugging scalable backend services and distributed systems using C#, .NET Core, ASP.NET Core, SQL Server, and Redis on Microsoft Azure. Shipped 20+ production REST APIs serving 2,000+ concurrent users at 99.9% uptime. Experienced in secure API design (OAuth 2.0, JWT, role-based access control), authenticated server-to-server integrations, distributed caching, performance optimization, production troubleshooting, root-cause analysis, and end-to-end feature ownership.

TECHNICAL SKILLS

Languages: C#, C++, JavaScript, SQL

Backend & Distributed Systems: .NET, .NET Core, ASP.NET Core, Web API, REST APIs, Distributed Systems, System Design, Clean Architecture, SOLID Principles

Cloud & DevOps: Microsoft Azure, Git, GitHub, CI/CD Pipelines, Source Control

Data & Caching: SQL Server, Redis, Distributed Caching, Query Optimization, Indexing

Reliability & Observability: Automated Testing, Logging, Monitoring, Telemetry, Incident Response, Root-Cause Analysis

Security: OAuth 2.0, JWT Authentication, Role-Based Authorization, Access Control

WORK EXPERIENCE

Software Engineer

July 2024 - Present

Newgen Software Technologies Limited

- Designed and shipped 20+ production-grade ASP.NET Core REST APIs serving 2,000+ concurrent users at 99.9% uptime, applying SOLID principles for long-term maintainability.
- Introduced a Redis caching layer across high-traffic endpoints, cutting redundant database reads and improving average API response time.
- Designed secure authentication and authorization flows, including OAuth 2.0 and JWT-based access control, for external system integrations.
- Owned features end-to-end from design through deployment and production support, partnering with frontend, QA, and DevOps.
- Investigated production issues, performed root-cause analysis, and implemented durable solutions.

Software Engineer Trainee

January 2024 – June 2024

Newgen Software Technologies Limited

- Designed and developed reusable modular backend components integrated into the core product architecture.
- Optimized complex SQL queries and indexing, reducing API response time by 40% and database load by 30%.
- Diagnosed and resolved critical production defects, reducing the defect rate by 30% and improving system stability.

PROJECTS

Omnirecruit

C#, ASP.NET Core, Angular, Web API, SQL Server, Redis, OAuth 2.0, JWT

- Designed and built the end-to-end hiring workflow engine covering assessment, scoring, interview, and final selection workflows.
- Integrated HirePro assessment APIs using OAuth 2.0 authentication and authorization for secure exchange of candidate and assessment data.
- Implemented authenticated server-to-server callback integration between HirePro and ATS, supporting OAuth 2.0 Client Credentials for secure API access.
- Integrated assessment result callbacks including scores, proctoring details, candidate profile links, and test-session information, with retry handling for failed callback responses.

Performance Management System

ASP.NET Core, C#, Angular, SQL Server, Redis

- Built a role-based goal-management platform supporting 1,000+ employees, with access controls aligned to user roles and workflow responsibilities.
- Designed and shipped 20+ REST APIs powering workflows, dashboards, approvals, and reporting.
- Implemented dynamic workflow state transitions with server-side validation and configurable business rules.
- Reduced page load time from 6 seconds to 2 seconds through query optimization and Redis caching.

EDUCATION

KIET Group of Institutions

Bachelor of Technology [CSE] 8.00 CGPA

July 2024

Ghaziabad, Uttar Pradesh
